

**COMP20003**  
**Algorithms and Data Structures**  
**Introduction to Graphs**

Nir Lipovetzky  
Department of Computing and  
Information Systems  
University of Melbourne  
Semester 2

**Graph definition**

Graph:

- a **representation** of a **set of objects**
- **some pairs** of objects are **connected by links**

COMP 20003 Algorithms and Data Structures

1-2

**Graph definition**

Graph  $G = \{V, E\}$  Set of:

- **Vertices**  $V$ : can contain **information**
- **Edges**  $E$  (links between vertices): can have **direction** and/or **weight**

Compared to **trees** and linked **lists**:

- vertices = nodes
- edges = links

1-3

**Undirected graph**

Edges have **no direction** specified

COMP 20003 Algorithms and Data Structures

1-4

**Connected**  
**Undirected graph**

Every pair of vertices is connected  
(possibly indirectly)

COMP 20003 Algorithms and Data Structures

1-5

**Unconnected**  
**Undirected graph**

Connected components

COMP 20003 Algorithms and Data Structures

1-6

**Unconnected**  
**Undirected graph with cycle**

Cycle:  
 $1 \rightarrow 2 \rightarrow 3 \rightarrow 1$ , etc.

COMP 20003 Algorithms and Data Structures

1-7

**Directed graph**

- Edge direction is specified
- Links are not symmetrical

COMP 20003 Algorithms and Data Structures

1-8

**Acyclic, unconnected  
directed graph**

COMP 20003 Algorithms and Data Structures

1-9

**Directed graph**

**Reachability:**

Can you get from Vertex 1 to Vertex 5?

COMP 20003 Algorithms and Data Structures

1-10

**Weakly connected  
Directed graph**

Replace all directed edges with undirected edges,  
to obtain a connected (undirected) graph

COMP 20003 Algorithms and Data Structures

1-11

**Strongly connected  
Directed graph**

If every vertex is reachable  
from every other vertex

COMP 20003 Algorithms and Data Structures

1-12

### Strongly connected Components in a Digraph

If **every** vertex is reachable from every other vertex within the **same** component

COMP 20003 Algorithms and Data Structures

1-13

### Bipartite Graph

- U and V are **disjoint sets** of vertexes
- Every **vertex in U** **connects** to a vertex in **V**, and viceversa

COMP 20003 Algorithms and Data Structures

1-14

### Complete graph

$V(V-1)/2$  **edges**

COMP 20003 Algorithms and Data Structures

1-15

### Trees and Graphs

**Tree**, undirected graph that is:

- Connected
- Acyclic
- *n.b.* Any two vertices are **connected** by **exactly one simple path**
- *n.b.* All vertices are connected

COMP 20003 Algorithms and Data Structures

1-16

Representing graph vertices

- Linked list nodes:

- Binary tree nodes:

COMP 20003 Algorithms and Data Structures

1-17

Vertices

- 2-3-4 tree nodes

But what if the number of links is potentially large (up to  $V-1$ )?

COMP 20003 Algorithms and Data Structures

1-18

Array representation

A	0	1	2	3	4
0	0	1	0	0	0
1	1	0	0	1	0
2	0	0	0	0	1
3	0	1	0	0	0
4	0	0	1	0	0

COMP 20003 Algorithms and Data Structures

1-19

Weighted undirected graph

713

COMP 20003 Algorithms and Data Structures

1-20

Array representation of weighted undirected graph

A	0	1	2	3	4
0		25			
1	25			40	
2					10
3		40			
4			10		

COMP 20003 Algorithms and Data Structures

1-21

	M	C	S	P	D
M	0	466	1050	2724	3642
C	466	0	247		
S	1050	247	0		
P	2724			0	2651
D	3642			2651	0

713

COMP 20003 Algorithms and Data Structures

1-22

	M	C	S	P	D
M	0	466	1050	2724	3642
C	466	0	247		
S	1050	247	0		
P	2724			0	2651
D	3642			2651	0

Canberra to Darwin?  
 $466 + 3642 = 4108$

COMP 20003 Algorithms and Data Structures

1-23

	M	C	S	P	D	A
M	0	466	1050	2724	3642	534
C	466	0	247			1160
S	1050	247	0			1163
P	2724			0	2651	2134
D	3642			2651	0	2620
A	534	1160	1163	2134	2620	0

Canberra to Darwin?  
Still  $466 + 3642$ ?  
Or  $466 + 534 + 2724$ ?

1-24

Shortest route between Melbourne and Dubbo?

- Considerations:
- Distance
  - Kind of road
  - Traffic points

COMP 20003 Algorithms and Data Structures

1-25

Shortest route between Melbourne and Dubbo?

COMP 20003 Algorithms and Data Structures

1-26

Array representation: weighted directed graph

A	0	1	2	3	4
0		25			
1				40	
2					
3					
4			10		

COMP 20003 Algorithms and Data Structures

1-27

Array representation: weighted directed graph

A	0	1	2	3	4
0		25			
1				40	
2					15
3					
4			10		

COMP 20003 Algorithms and Data Structures

1-28

### Array representation: initialization

A	0	1	2	3	4
0	$\infty$	25	$\infty$	$\infty$	$\infty$
1	25	$\infty$	$\infty$	40	$\infty$
2	$\infty$	$\infty$	$\infty$	$\infty$	10
3	$\infty$	40	$\infty$	$\infty$	$\infty$
4	$\infty$	$\infty$	10	$\infty$	$\infty$

COMP 20003 Algorithms and Data Structures

1-29

### Adjacency list representation

L	
0	→ 1
1	→ 0 → 3
2	→ 4
3	→ 1
4	→ 2

COMP 20003 Algorithms and Data Structures

1-30

### Directed graph: Subject prerequisites

Which representation?

COMP 20003 Algorithms and Data Structures

1-31

### Size of matrix and list

- **Size of representation** in terms of
  - $|V|$  number of vertices
  - $|E|$  number of edges
- Matrix
  - $O(|V|^2)$
- Adjacency list
  - $O(|V| + |E|)$

COMP 20003 Algorithms and Data Structures

1-32

### Some interesting graph path problems

- Reachability
- Single shortest path
- Single source shortest path
- All pairs shortest paths
- Travelling Salesman Problem

COMP 20003 Algorithms and Data Structures

1-33

### Other interesting graph problems

- Minimum Spanning Tree
- Topological sort
- Map coloring
- Matching

COMP 20003 Algorithms and Data Structures

1-34

### History

- Graph theory started with Euler (1736) who was asked to find a nice path across the seven Königsberg bridges

- The (Eulerian) path should cross over each of the seven bridges (edge) exactly once

COMP 20003 Algorithms and Data Structures

1-35

### History

- Another early precursor was Sir William Rowan Hamilton (1805-1865)

In 1859 he developed a toy based on finding a path visiting all cities (vertexes) in a graph exactly once and sold it to a toy maker in Dublin. It never was a big success

1-36

## History

Build your own game

Or play it here: <http://neamar.fr/Res/Icosien/> (Flash)

- Euler Game:
  - Traverse an **Edge** once: <https://youtu.be/zrGEIutUIJQ>
- Hamiltonian Cycle:
  - Traverse an **Vertex** once: [https://youtu.be/PU7ZIA0\\_Z5w](https://youtu.be/PU7ZIA0_Z5w)
- Analysis: <https://www.naturelovesmath.com/en/games/icosian-a-graph-theory-game/>

1-37

## Applications

But **now** graph theory is used for **finding communities in networks**

where we want to **detect hierarchies of substructures**

COMP 20003 Algorithms and Data Structures

1-38

## Applications

and their **sizes** can become **quite big** ...

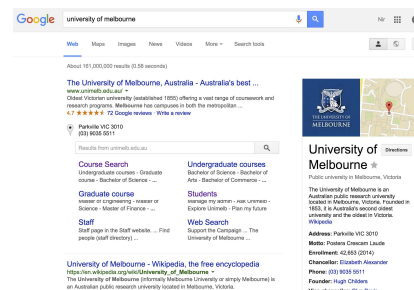

COMP 20003 Algorithms and Data Structures

1-39

## Applications

It is also used for **ranking (ordering) hyperlinks**

1-40

## Applications

or by your **GPS** to find the **shortest path** home ...

... and the list should go on for hours

COMP 20003 Algorithms and Data Structures

1-41
