Workshop 5 – Week 6 – Worksheet 6

Question 6.1 You are given a hash table of size 13 and a hash function hash(key) = key % 13

Insert the following keys in the table, one-by-one, using linear probing for collision resolution. Keys to insert: 14, 30, 17, 55, 31, 29, 16

Now insert the same keys into an (initially empty) table of the same size, using double hashing for collision resolution, with hash2(key) = (key % 5) + 1

Linear Probing
